

How to Recover Photos and Music from Mobile Phone Memory Card?

I deleted some important photos in my Blackberry, so now I am in a tension. These photos are really precious for me, how can I recover them?

Asked by Janese from Yahoo Answer

Have you ever meet the same problem like that? Is it possible to [recover photos from memory card](#)? See the article below to see if you can get back photos from mobile phones.

With the rapid development of technology, the function of mobile phone becomes stronger and diversified, not only for the use of communication, more and more mobile phones in the market these days also are equipped with a digital camera. And save pictures the mobile phone took to memory card. The most common memory cards used in mobile phones are **microSD, MiniSD, MicroSDHC, TransFlash Card, RS-MMC**, etc. And they are commonly used for popular mobile phone brands like Nokia, Motorola, Samsung, Blackberry, etc. This enriches our digital life, nevertheless, we may delete pictures from mobile phone because of mistakenly operation or naughty of your children. Then how can you retrieve **deleted pictures from memory card**?

Generally, these mobile phones support saving pictures they took with two ways – by external phone memory (memory card) and by internal phone memory.

Recover photos from external phone memory (memory card)

If you have saved the photos on external phone memory, the chance to get back the lost images is greater. You have two choices:

- 1. Take out of the memory card and insert it to a card reader. Then connect the card reader to PC. Once the card reader is detected by the PC and appears as a drive letter in “My Computer”, you can use [Memory Card Recovery software](#) to scan the drive letter and recover deleted photos.
- 2. Connect the mobile phone to your computer’s USB port directly, If it was detected, selected memory card drive and use **memory card data recovery** program to scan the card and rescue lost images.

Recover Photos from internal phone memory

There are still some mobile phones in the market do not support external phone memory, or you have saved photos on internal phone memory, in these cases, you have to connect your phone to computer's USB port. If it can be detected and appears as a drive letter in "My Computer", you can use **Memory Card Recovery** program to get back lost pictures. If not, there is no way to recover lost photos with software tools.

Memory Card Recovery supported almost all mobile phone operation system including Symbian, Android, Windows Mobile, Windows Phone, Palm and BlackBerry. Popular mobile phones supported by it including Samsung, HTC, Motorola, LG, BlackBerry, Sony Ericsson, Nokia, etc.
