

Have You Ever Wondered Who Invented the Internet?

If you're wondering who invented the Internet, you may find the answers straight from several online portals which give you no-nonsense results with a quick click of the mouse.

Misleading Assumptions, Real Inventors

While some may assume that it was Al Gore who invented the Internet, this assumption really doesn't hold much truth. According to these various online research portals that you may check for verification purposes, the Internet was invented during the latter part of the 1950s to the 1970s. And, instead of Al Gore as many might have thought, the realization of the presence of the Internet was due to the successful collaboration of a group of scientists and researchers in the United States.

This group, who invented the Internet, is known as the ARPA or the Advanced Research Projects Agency. The project on the Internet was done after Sputnik was launched by the USSR instead of the US. That was a huge technical blow to the US since it had allowed the Soviet Union to beat them into space.

Hard Work and Perseverance to Realize a Bright Idea

After the technological launch, the ARPA went to work. Their unified purpose was to create something bigger, more successful than Sputnik; something that hasn't been done yet in the past. They worked hard at this and the outcome was the Internet.

A Thousand Benefits for Many People

At present, everyone – from all walks of life, in different countries – now know the existence, use, and benefits that this group has given to many. Thanks to this group who invented the Internet.

New life had now breathed in to the use of computers. And it has shortened the distance of people from all over the globe. It has even made searching, researching, buying, getting in touch, and other entertaining things to do quite simple and quick to do.

Particular People Who Contributed to the Success

For the ARPA group who invented the Internet, there are particular people that many of us have much to say our heartfelt gratitude to. A few hardworking people of the group contributed much. Among them are J.C.R. Licklider and Lawrence Roberts.

Much credit and recognition should be bestowed to J.C.R. Licklider. Licklider is none other than the head of the Information Processing Technology Office of the group. The invention actually started with a great idea of Licklider, which was to unify people through a universal network. But to implement the idea, Licklider had to recruit other people who were highly adept and knowledgeable in actual computer programming.

Lawrence Roberts, on the other hand, was the person who had the chance to lead the ARPA team. Roberts is known to utilize the creation of Leonard Kleinrock. This was merely a

proposed method by Kleinrock using packet switching in the successful transfer of pertinent data.

Amidst great success, Roberts had chosen to quit working in 1973 with the team who invented the Internet. Vinton Cerf and Robert Kahn were the people who took Robert's position, and worked with the modifications of the packet switching. Cerf and Kahn were able to create the TCP/IP protocols, and the term ARPANET was then changed to the Internet.
